Case No. 07-CV-1658 (PJH)

**JOINT CASE MANAGEMENT  
CONFERENCE STATEMENT**

F.R.C.P. 16 and Civil L.R. 16-10

Date: April 24, 2008  
Time: 2:30 p.m.  
Place: Courtroom 3, Floor 17  
Judge: Honorable Phyllis J. Hamilton

1 Plaintiffs Oracle Corporation, Oracle USA, Inc. and Oracle International  
2 Corporation (collectively, “Oracle” or “Plaintiffs”) and Defendants SAP AG, SAP America, Inc.  
3 (“SAP America”) and TomorrowNow, Inc. (“TN” and collectively with SAP AG and SAP  
4 America, “Defendants,” and together with Oracle, the “Parties”) jointly submit this Case  
5 Management Conference Statement in advance of the April 24, 2008 Case Management  
6 Conference.

## 7 1. Jurisdiction And Service

8 This action arises under the Federal Copyright Act, 17 U.S.C. §§ 101 *et seq.*, and  
9 the Computer Fraud and Abuse Act, 18 U.S.C. §§ 1030 *et seq.* Accordingly, this Court has  
10 subject-matter jurisdiction over this action pursuant to 18 U.S.C. § 1030(g), 28 U.S.C. § 1331,  
11 and 28 U.S.C. § 1338. This Court has supplemental subject-matter jurisdiction over the pendent  
12 state law claims under 28 U.S.C. § 1367. The Parties are not aware of any issues with respect to  
13 personal jurisdiction or venue. All named Defendants have been served and have answered the  
14 First Amended Complaint. Oracle is not currently aware of the names or capacities of any Doe  
15 Defendants, but will add and serve any such Defendants promptly upon discovering their  
16 identities. Defendants reserve the right to challenge any such proposed amendment.

## 17 2. Facts

### 18 A. Oracle’s Statement

19 *Initial Claims.* This case involves a scheme of copyright infringement, theft,  
20 interference and unlawful business practices that goes to the core of SAP’s and Oracle’s business  
21 and their competition for customers. Oracle brought this action one year ago, after it uncovered  
22 massive unlicensed downloading from Oracle’s customer support website by a recently-acquired  
23 subsidiary of its largest competitor, SAP. As alleged in the First Amended Complaint (“FAC”),  
24 those downloads were then used to provide support to Oracle customers at half-price so that they  
25 could be taken from Oracle over to SAP’s software platform. Those claims by themselves are  
26 significant in scope and nature, involving at least dozens of customers and over ten thousand  
27 unauthorized downloads.

28 *Amended Claims.* Based on recent discovery, Oracle soon will file a Second

1 Amended Complaint (“SAC”). In the hopes of securing Defendants’ agreement to this filing,  
2 Oracle has already provided them with a draft and will provide the Court a copy of that draft for  
3 *in camera* review if desired.<sup>1</sup> The SAC will reveal a pattern of unlawful conduct that is different  
4 from, and even more serious than, the mass downloading that was the primary focus of the FAC.

5 The SAC will make two important changes in Oracle’s allegations, both of which  
6 originate from evidence uncovered in preliminary Rule 30(b)(6) depositions of TN employees  
7 over the past several months.

8 First, the unauthorized downloads featured in the FAC are just an initial piece of  
9 an overall illegal business model at TN. This business model relied on the theft and use of  
10 infringing copies of Oracle’s *underlying software applications*, not just the mass-downloaded  
11 Oracle support materials. TN warehoused these copied software applications as “generic  
12 software environments” and used them as a “sandbox” to service other customers, train its  
13 employees, and create fake “SAP” branded fixes, updates and related documentation for  
14 distribution. Through this process, TN made thousands of copies of Oracle’s software, and  
15 distributed thousands of infringing fixes, updates and related copyrighted documents.

16 Second, it appears that SAP AG and SAP America knew – at executive levels – of  
17 the likely illegality of TN’s business model from the time of their acquisition of TN and, for  
18 business reasons, failed to change it.

19 This expansion of the allegations will have a significant impact on the prosecution  
20 of the action.

21 *Remaining Discovery.* SAP stated in the initial Case Management Conference  
22 Statement that discovery in this case would be “typical.” It is not. To date, the discovery in this  
23 case has involved immense computer records, including terabytes of data, that require weeks to  
24 simply copy, not to mention produce, review and digest. This case also involves potentially  
25 hundreds of third parties, thousands of computer software environments, and tens of thousands

26 \_\_\_\_\_  
27 <sup>1</sup> Because information contained in the draft SAC is Highly Confidential and Confidential, any  
28 public filing will require sealing.

1 of distinct downloads of Oracle Software and Support Materials. Even without considering the  
2 amended claims, the large scope of discovery has already required both sides to hire small armies  
3 of contract attorneys to review the millions of pages of documents collected for possible  
4 production. The vast amount of electronic evidence has already required constant attention from  
5 numerous forensic experts on both sides for discovery to proceed efficiently. That exchange of  
6 technical expertise is still being negotiated, and may take months to complete according to  
7 Defendants.<sup>2</sup>

8 At the same time, the Parties have engaged in an intensive motion to compel  
9 schedule before the Special Discovery Master assigned to the case, the Honorable Charles A.  
10 Legge (Ret.), the end result of which is that most of the preliminary discovery blocks have  
11 cleared and the Parties are ready to begin deposition discovery in earnest once they produce  
12 priority documents. However, the production of these documents is also taking an extraordinary  
13 amount of time. Defendants' counsel chose to first focus on production from TN. At this point,  
14 document production is only now beginning for two Defendants and is not close to being done  
15 even for TN. Not willing to wait for full document discovery under the current schedule, Oracle  
16 has taken eight days of foundational Rule 30(b)(6) depositions (some of which have offered the  
17 basis for Oracle's amended claims); initial 30(b)(6) depositions from SAP AG and SAP America  
18 are currently scheduled and more will be required. The Parties will require numerous employee  
19 depositions from each other and customer and other third party depositions in disparate locations  
20 around the United States and in various foreign jurisdictions, many of which will (unless SAP  
21 agrees otherwise) require time-consuming Hague Convention discovery protocols. The subjects  
22 are vast and complicated, including the development, maintenance and use of these thousands of  
23 customer support environments by Defendants – none of which has yet been produced because  
24 the physical size of these electronic records is so great. Judge Legge has ordered the Parties to

25 \_\_\_\_\_  
26 <sup>2</sup> Defendants propose providing Oracle remote access to these additional servers rather than  
27 providing Oracle images of them. This is because there is so much Oracle software on  
28 Defendants' computer systems, that it could take them several months – or longer – just to make  
a copy of these environments so that Oracle can begin to review and analyze them.

1 meet and confer on these issues, and the Parties have done so, with limited success because of  
2 the uncertainty of the discovery deadlines.

3 In short, the new claims significantly exceed the size and scope of the initial  
4 claims. Getting to the bottom of them will require additional significant expansion of the current  
5 case schedule and discovery limits. *See* Sections 9 and 19 below.

### 6 **B. Defendants' Statement**

7 Ignoring Judge Jenkin's admonitions, Oracle continues to submit hyperbolic  
8 argument in the guise of a CMC statement. CMC statements are not meant to be closing  
9 arguments or press releases, and this particular section of this filing is supposed to be the "facts"  
10 section.

11 Oracle sued SAP and TomorrowNow last year, alleging that TomorrowNow's  
12 downloading of software and support materials on behalf of its customers violated those  
13 customers' licenses with Oracle (licenses that Oracle still has yet to completely produce more  
14 than a year after this case was filed). This case is at bottom a commercial dispute between fierce  
15 competitors. TomorrowNow has openly provided "third party" support for users of Oracle  
16 software for many years, both before and after its acquisition by SAP. TomorrowNow's  
17 customers are entitled to use their Oracle-licensed software and materials properly obtained from  
18 Oracle's website to maintain that software. TomorrowNow performs that maintenance service  
19 for its customers, allowing them to focus their personnel on their core business. It should be no  
20 surprise to anyone, including Oracle, that TomorrowNow has accessed Oracle software in  
21 providing support to users of that software.

22 As Judge Jenkins recognized, this case raises three basic questions:

23 (1) What Oracle software did TomorrowNow access in providing support;

24 (2) Do the licenses between Oracle and its customers prevent TomorrowNow  
25 from access to that software to provide third party support; and

26 (3) Was Oracle harmed by any impermissible access (and, if so, how much)?

27 Defendants address Oracle's assertions regarding discovery, amended pleadings  
28 and scheduling in the appropriate sections below. And, as explained further below, the pending

1 Case Management Conference presents an opportunity to impose a structure that will compel  
2 Oracle to identify the key disputed elements of its claims. Oracle's position regarding the  
3 alleged "facts" in dispute below, highlights the need for such structure.

### 4 3. Facts In Dispute

#### 5 A. Oracle's Position

6 Defendants' Answer, filed on July 2, 2007, partially admitted certain allegations  
7 by Oracle, and Oracle expects that Defendants' Answer to the forthcoming Second Amended  
8 Complaint will also admit many of the allegations. However, a substantial number of disputed  
9 factual issues remain related to the alleged access to, downloading of, copying and competitive  
10 misuse of Oracle's intellectual property, including but not limited to:

- 11 • The extent to which the Software and Support Materials were accessed,  
12 taken and used "inappropriately" as described by SAP AG's CEO during  
13 Conference Calls on July 2-3, 2007 or beyond the scope of any applicable  
14 license;
- 15 • Whether SAP can avoid being bound by the terms of use, license  
16 agreements and other agreements associated with Oracle's customer  
17 support website and the underlying Oracle software applications;
- 18 • The extent to which SAP involved customers in the downloading or  
19 further use of the Software and Support Materials or the underlying Oracle  
20 software applications;
- 21 • The extent to which SAP AG and SAP America were involved, directly or  
22 indirectly, in accessing, downloading or using any Software and Support  
23 Materials or any underlying Oracle software applications;
- 24 • The extent to which SAP AG or SAP America knew, before, during or  
25 after the acquisition of TN, that TN engaged in illegal downloading of  
26 Oracle's Software and Support Materials and misuse of the underlying  
27 Oracle software applications as part of its "business model;"
- 28 • The extent of any breach of any SAP or SAP AG policies allegedly put in  
place to assure that no confidential or copyrighted material of Oracle  
reached SAP AG or SAP America;
- The extent to which the Defendants' access, downloading and use of  
Oracle's Software and Support Materials and the underlying Oracle  
software applications allowed SAP to compete more effectively against  
Oracle and interfere with Oracle's customer relationships;
- Whether the Defendants had authorization, permission or other right to  
access Oracle's computer systems, or exceeded any such authorization,  
permission or other access right;

- 1 • Whether the Defendants intended to defraud Oracle through their access to  
2 Oracle's computer system;
- 3 • Whether the Defendants knowingly caused the transmission of a program,  
4 information, code or command and as a result caused damage to Oracle's  
5 computer system;
- 6 • Whether the Defendants knowingly and fraudulently accessed and used  
7 Oracle's computer services without permission;
- 8 • Whether the Defendants knowingly and fraudulently accessed, took,  
9 copied or made use of programs, data or files from Oracle's computer  
10 system without permission;
- 11 • Whether the Defendants accessed, provided a means of access or assisted  
12 in providing a means of accessing Oracle's computer system causing  
13 damage to Oracle;
- 14 • The extent to which Defendants created and used derivative works from  
15 Oracle's Software and Support Materials and the underlying Oracle  
16 software applications;
- 17 • Whether the Defendants had authorization, permission or other right to  
18 copy, create derivative works from (or using), distribute, reproduce or  
19 publicly display Oracle's Software and Support Materials or the  
20 underlying Oracle software applications;
- 21 • The extent to which the Defendants controlled, directed, induced or  
22 materially contributed to the copying, distribution, public display or  
23 creation of derivative works from (or using) Oracle's Software and  
24 Support Materials or any underlying Oracle software applications;
- 25 • Whether the Defendants used Oracle's Software and Support Materials or  
26 underlying Oracle software applications without being the authorized and  
27 designated Oracle technical support contact, without a legitimate business  
28 purpose or in ways other than in the furtherance of a relationship with  
Oracle;
- Whether the Defendants interfered in Oracle's expectancy in continuing  
and advantageous economic relationships with current and prospective  
purchasers and licensees of Oracle's support services and software;
- The extent to which the Defendants took commercial advantage of  
Oracle's investment in its Software and Support Materials or any  
underlying Oracle software applications;
- Whether the Defendants intentionally interfered with Oracle's use or  
possession of its computer systems, including Customer Connection,  
causing damage to Oracle's computer systems; and,
- The extent of damages, including punitive damages, owing to Oracle  
arising from the Defendants' conduct as alleged in the operative  
Complaint.

1                   **B. Defendants' Position**

2                   Oracle's statement of disputed issues is misleading. Oracle recites essentially  
3 every element of every one of its claims as a factual dispute, ignoring that its repetitive claims all  
4 boil down to the same basic issues -- what was allegedly copied; was that copying permissible;  
5 how was Oracle harmed? Those are the factual issues in dispute.

6                   **4. Legal Issues In Dispute**

7                   Subject to change based on the allegations in the forthcoming SAC, the following  
8 legal issues are in dispute:

- 9                   • Whether Defendants or any one of them have engaged in copyright infringement;
- 10                  • Whether Defendants or any one of them have violated the Computer Fraud and Abuse Act (18 U.S.C. §§ 1030(a)(2)(C), (a)(4) & (a)(5));
- 11                  • Whether Defendants or any one of them have violated the Computer Data Access and Fraud Act (California Penal Code § 502);
- 12                  • Whether Defendants or any one of them have and if so breached contractual obligations to Oracle;
- 13                  • Whether Defendants or any one of them intentionally or negligently interfered with Oracle's prospective economic relationships with its current and/or potential customers;
- 14                  • Whether Defendants' alleged access to Oracle's computer systems through Customer Connection constitutes trespass to chattels;
- 15                  • Whether Defendants or any one of them have been unjustly enriched, and in what amount, through the activities alleged in the First Amended Complaint;
- 16                  • Whether Oracle has been damaged, and in what amount, by Defendants' activities alleged in the First Amended Complaint;
- 17                  • Whether Defendants have any defense to the allegations in the First Amended Complaint, including through any argument that their activities are permitted by any agreement; and,
- 18                  • Whether the materials as to which Oracle claims copyright protection were properly copyrightable, properly and timely registered, and properly asserted and/or owned by Oracle.

19                  **5. Motions**

20                  **A. Oracle's Position**

21                  If Defendants will not stipulate to the filing of Oracle's SAC, Oracle will bring a  
22  
23  
24  
25  
26  
27  
28

1 motion to amend promptly. Further, Oracle expects that it will need to bring further discovery  
2 motions before Judge Legge to resolve discovery disputes as they arise in the future. The Parties  
3 have stipulated to have a discovery hearing before Judge Legge every three weeks, a schedule  
4 that has effectively kept discovery progressing. If this Court elects to continue the use of the  
5 special master process (which Oracle strongly encourages), then Defendants would like to  
6 change this schedule to once a month, which Oracle is willing to do so long as the case schedule  
7 is expanded as it requests so as to allow adequate time for resolution of discovery disputes.  
8 Finally, Oracle may bring motions for summary judgment or summary adjudication at an  
9 appropriate time after sufficient discovery has been taken.

#### 10 **B. Defendants' Position**

11 Defendants will evaluate Oracle's proposed amended complaint once Oracle  
12 commits to a final version. Defendants' position regarding management of discovery disputes is  
13 set forth below. Defendants' objections to the first and second discovery orders are pending.  
14 Defendants may bring dispositive motions when Oracle provides additional discovery and/or  
15 files its proposed amended complaint.

#### 16 **6. Amendment Of Pleadings**

17 Oracle filed the operative FAC on June 1, 2007. Defendants answered on July 2,  
18 2007.

#### 19 **A. Oracle's Position**

20 Oracle's finalization of the SAC has been hindered by Defendants' discovery  
21 delays, including their cancellation of scheduled TN 30(b)(6) depositions and refusal to timely  
22 schedule SAP AG and SAP America 30(b)(6) depositions. Within a week of taking the latest  
23 TN 30(b)(6) deposition, Oracle provided Defendants with a draft of its SAC for review and will  
24 promptly provide them with any additional revisions arising from receipt of additional copyright  
25 registrations and from the upcoming TN, SAP America and SAP AG 30(b)(6) depositions and  
26 the anticipated SAP America and SAP AG productions. If Defendants will stipulate to filing of  
27 the SAC, Oracle expects to file it by June 1, 2008, subject to when it receives newly filed  
28 copyright registrations back from the copyright office.

**B. Defendants' Position**

The extreme over breadth of Oracle's proposed 30(b)(6) topics and resulting meet and confers coupled with the logistics of scheduling multiple witnesses in multiple locations have resulted in some scheduling delays, none of which have been unreasonable or could in any way be characterized as a refusal to schedule any 30(b)(6) deposition. During the last CMC in February, Oracle proposed to yet again amend its complaint, and it is now once again delaying the amendment so that it can belatedly register alleged copyrights. Oracle provided Defendants with a draft a few days before this filing, making it clear that Oracle would make further changes and that filing of the amended complaint was some time off in the future. Defendants will evaluate the proposed amended complaint when Oracle provides a draft to which it will commit.

**7. Evidence Preservation**

The Parties have exchanged assurances of evidence preservation, and further engaged in detailed meet and confer discussions regarding evidence preservation efforts. The Parties resolved a number of issues in dispute and reached preliminary agreement on a number of the topics. Moreover, finalization of a Stipulated Preservation Order is still under discussion. Discussions also continue regarding the proper preservation of evidence related to any ongoing customer support activities by TN with the hope of filing a stipulation regarding Defendants' access to and use of Oracle's Software and Support Materials.

**8. Disclosures**

The Parties exchanged their Initial Disclosures pursuant to Fed. R. Civ. Proc. 26 on August 16, 2007.

**9. Discovery****A. Oracle's Position**

As Oracle anticipated, the discovery necessary to prove Oracle's initial claims has been, and will continue to be, sizeable and time-consuming. Nonetheless, to date, discovery has revealed, for example:

- Defendants have a dedicated bank of 20 "download servers" to accomplish the unauthorized taking and infringing conduct Oracle previewed in the FAC.

- 1 • Defendants compiled a master download library of Oracle-based Software  
2 and Support Materials that exceeds five terabytes in size – so large that  
3 Defendants could not produce it for over six months.
- 4 • Defendants “exploded” the downloads, making it virtually impossible to  
5 identify the customer credential used to take the versions residing in the  
6 master library, leading Judge Legge to recommend a technical conference  
7 of engineers from both sides to meet at TN’s premises to evaluate the  
8 problem and devise a way to understand the liability issues.
- 9 • The “SAS” database, which Defendants did eventually produce, is so large  
10 and so complex that Judge Legge has ordered a similar technical  
11 conference so that the Parties can effectively mine it for responsive  
12 information.
- 13 • In addition, Defendants have approximately 3,000 copies of Oracle  
14 software applications on their systems, each one of which may  
15 additionally have included within it illegally downloaded Software and  
16 Support Materials.
- 17 • Virtually every one of the almost 200 TN employees had some  
18 involvement in TN’s illegal activity. Documents produced by Defendants  
19 suggest that SAP AG and SAP America employees and managers had  
20 involvement in or knowledge of TN’s infringing conduct.

21 Oracle’s discovery of these facts occurred despite considerable resistance from  
22 the three SAP Defendants. Much progress has been made recently through the assistance of  
23 Judge Legge. However, as Judge Legge stated in his March 19, 2008 Report and  
24 Recommendations: “Discovery is progressing, but slowly. Both sides are hard at work on  
25 discovery responses, but the size of the discovery needs on both sides is very extensive.” As a  
26 result of his exposure to the sweep of the case, Judge Legge has properly focused the Parties on  
27 liability discovery initially: “The parties presently have a lot to do in responding to each other’s  
28 discovery requests on the issues of liability. And some of those responses might impact the  
scope of the damages claims and defenses.” February 22, 2008 Report and Recommendations at  
9. He therefore recommends the initial pre-trial order be modified to expand the prior discovery  
schedule and stage damages discovery after liability discovery and expert discovery after that.

*Id.*

*Use of 30(b)(6) Depositions.* Because of Defendants’ successful initial efforts to

1 secure a short period for discovery and to limit depositions to 20 per side,<sup>3</sup> and because of  
2 Defendants' substantial delays in producing documents and their practice of responding to  
3 interrogatories by referencing unspecified documents rather than providing narrative,<sup>4</sup> Oracle has  
4 been forced to seek relevant information through the use of broad Fed. Rule of Civil Procedure  
5 30(b)(6) depositions, often without relevant documents. Oracle has thus far taken eight days of  
6 foundational depositions of TN 30(b)(6) witnesses.<sup>5</sup> These depositions have taken months to  
7 schedule. Moreover, certain deponents were not sufficiently prepared for their depositions and  
8 another deponent was pulled at the last minute for reasons that have remained unexplained.  
9 Oracle served SAP America and SAP AG with a 30(b)(6) deposition notice in January, and has  
10 only recently received proposed dates pursuant to an order from Judge Legge for those to  
11 proceed in late April.

12 Faced with discovery motion practice from both sides related to Oracle's use of  
13 30(b)(6) depositions, Judge Legge recently observed and recommended: "The Master  
14 understands that 30(b)(6) procedures are being used in part because the pre-trial order of  
15 September 25, 2007 presently limits the Parties to 20 depositions apiece, and the necessary  
16 individual depositions would undoubtedly be in excess of that number. The Master recommends  
17 that the Court consider increasing the number of individual depositions allowable in discovery so  
18 \_\_\_\_\_

19 <sup>3</sup> Over Oracle's objections, in his September 25, 2007 Pretrial Order, Judge Jenkins ordered fact  
20 discovery be completed by July 25, 2008 and restricted the parties to 20 depositions per side,  
though he made clear those limits could be expanded upon motion.

21 <sup>4</sup> For instance, despite being served with document requests last fall, to date, neither SAP AG nor  
22 SAP America have produced a single document, though close of fact discovery under the initial  
Pre-Trial order is three months away. Frustrated by this, Oracle, through discovery motion  
23 practice, secured a recommendation from Judge Legge that production from those Defendants'  
priority custodians be produced by April 15th and from TN's priority custodians by the end of  
24 March. Report and Recommendations Re: Discovery Hearing No. 3 at 2. Defendants repeatedly  
stated they cannot meet these production dates. Judge Legge responded: "I am saying April  
25 15th. You get before Judge Hamilton and you scream at what I am recommending, okay, and by  
then, . . . you better be prepared to give some better explanation what you think a reasonable time  
26 basis is going to be. . .". March 4, 2007 Discovery Hearing Transcript at 56. On April 9,  
Defendants appealed Judge Legge's order, confirming SAP AG and SAP America will have  
done little or no production by April 15 or before their scheduled 30(b)(6) depositions.

27 <sup>5</sup> Defendants are treating those as eight of Oracle's 20 currently allowed depositions.  
28

1 that the 30(b)(6) problems might be reduced, if not entirely eliminated.” April 4, 2008 Report  
2 and Recommendations at 4.

3 *Other Discovery Issues and Motions.* Other discovery obstacles and disputes  
4 have further slowed the case. For instance:

- 5 • The sheer size of the electronic data at issue has created enormous delays. For example, the total files in the download libraries on the one server TN  
6 has produced (the DCITBU01 server) include over 6 million individual  
7 PeopleSoft files and over 1 million individual JDE files; the server  
8 includes approximately 6 terabytes of data. Because of its size, TN has  
9 taken several months to produce it and has done so in 500 gigabyte chunks  
10 that Oracle needs to reconfigure. Production of TN’s 8 gigabyte SAS  
11 customer service database was similarly delayed.
- 12 • Defendants’ overly broad interpretation of Fed. R. Civ. Proc. 33(d) when  
13 responding to Oracle’s interrogatories required Oracle to file discovery  
14 motions to secure Judge Legge’s recommendation that Defendants provide  
15 complete, candid and specific responses (which Judge Legge has  
16 recommended, but Oracle has not received).
- 17 • Defendants objected to continued receipt of Highly Confidential material  
18 by Oracle’s lead in-house litigation counsel after she was promoted to  
19 General Counsel but still actively involved in the case. This necessitated  
20 further motion practice by Oracle to retain that right.
- 21 • Defendants refused to produce obviously relevant documents they  
22 produced to the government in its criminal investigation of Defendants’  
23 conduct and, when ordered to do so by Judge Legge, appealed his ruling.<sup>6</sup>
- 24 • Defendants insisted on designating the entirety of TN’s SAS database –  
25 which they described from the onset of the case as *the* treasure trove for  
26 relevant information – Highly Confidential, despite its inclusion of almost  
27 no material that fits that definition. This vastly reduced those within  
28 Oracle who could see its contents and prevented Oracle from using its own  
technical expertise in analyzing the contents. Oracle had to secure its de-  
designation by discovery motion; Defendants have appealed that ruling.
- In addition, discovery and internal analysis of the SAS database revealed  
that, rather than being the only source needed for relevant information, the  
SAS database is just one of many databases and servers that house highly-  
relevant materials which Oracle will need to review to understand the  
scope of Defendants’ illegal use of Oracle’s software. The Parties are  
only now grappling with how to get Oracle access to these.

---

<sup>6</sup> Per Your Honor’s March 20, 2008 Notice and Order, Defendants’ objections will not be ruled upon until after the April 24, 2004 Case Management Conference.

- 1                   • Finally, SAP AG's refusal to waive aspects of the Hague Convention to  
2 allow for speedier depositions of its personnel (despite Oracle's provision  
3 of authority allowing them to do so) will make securing these important  
4 depositions even more difficult and slow.

5                   *Third Party Discovery.* Third party subpoena processes have been similarly time  
6 consuming. Thus far, Oracle has served 46 customer subpoenas and eight third party subpoenas  
7 related to the acquisition of TN. Defendants' slow review of third party customer documents for  
8 confidentiality and of third party TN acquisition documents for privilege required discovery  
9 motion practice before Judge Legge.

10                   *Oracle's Response to Defendants' Discovery.* Simultaneously, Oracle has  
11 responded to sweeping discovery from Defendants. Though some of Oracle's initial responses  
12 have required supplementation, and Defendants have complained, at times, about not receiving  
13 all the documents they want, as quickly as they want, Oracle has worked diligently to provide  
14 relevant, responsive information. Using an army of contract attorneys, Oracle has reviewed  
15 almost one million documents – an estimated four million pages – and has produced over  
16 100,000 pages. By May, Oracle also will have logged thousands of privileged documents from  
17 numerous custodians. It has also agreed to produce many more documents by May 6th. Further,  
18 Defendants' claim that Oracle has not produced any damages discovery is far from true. Many  
19 of the documents already produced, and that are being reviewed for production by May 6th,  
20 relate directly to damages, including the following categories of financial documents in response  
21 to Defendants' damages requests: (1) historical quarterly and fiscal year budgeting and income  
22 reports; (2) historical reports reflecting PeopleSoft and JD Edwards support cancellation rates  
23 and actual support bookings data; (3) licensing and support revenue and forecasting information;  
24 and, (4) reports reflecting customer losses and negotiations due to TomorrowNow's illegal  
25 activity. Oracle has also successfully resisted various discovery motions by Defendants seeking  
26 unreasonable expansion of its production.

27                   *Oracle's Proposal on Discovery Limits.* As demonstrated above, the issues that  
28 remain to be discovered in this matter are vast and complex. Enormous amounts of highly  
relevant computer data have yet to be produced by TN. SAP AG and SAP America are only

1 now beginning their productions. Key foundational interrogatories have yet to be answered.  
2 Further foundational 30(b)(6) depositions, particularly from SAP America and SAP AG, are  
3 required. Also required are individual depositions of board members, executives, sales and  
4 marketing personnel, and customer support, software development, and information technology  
5 personnel from each of the three Defendants.<sup>7</sup>

6 Discovery from third parties is no less complex. While Oracle's internal  
7 investigations have revealed 69 of its former service customers were implicated in Defendants'  
8 improper downloading, the total number of Oracle customers who migrated to TN exceeds 350  
9 and Oracle expects discovery from the Parties and from the customers will be required as to  
10 many of those. Many of them are large, multi-national corporations, headquartered in various  
11 U.S. and foreign jurisdictions. Oracle does not currently intend to depose each of them;  
12 however, it has just begun to receive the foundational discovery necessary to determine its focus.  
13 Discovery is also required from other third parties, such as Defendants' deal lawyers and  
14 software consultants.

15 Finally, expert discovery will be complicated and critical. Not only will there be  
16 several highly technical expert depositions about the downloading and use of Oracle's software,  
17 there will be industry experts and damages experts. They have a massive amount of material to  
18 analyze before they can provide their reports and testimony.

19 Oracle thus requests that the Court order the following:

20 **Fact Depositions:** Oracle agrees with Judge Legge that the limits on depositions  
21 must be expanded and proposes an expansion of the total fact deposition limit to 80 depositions  
22 per side (party and third party), without prejudice to any party to seek leave of Court to obtain  
23

---

24 <sup>7</sup> *E.g.*, TN's 30(b)(6) witness, Mark Kreutz, testified every support engineer and developer who  
25 ever worked for the company would have to be questioned to determine the extent of TN's use of  
26 Oracle's intellectual property. This would involve nearly 50 witnesses just on the subject of how  
27 TN used the downloads it took from Oracle, and not including the creation and use of the local  
28 environments that are the focus of Oracle's new claims. While Oracle does not intend to take all  
50 depositions, this testimony illustrates the pervasive nature of TN's conduct, and the work  
Oracle must do to understand it and determine the harm resulting from it.

1 further depositions if discovery reveals a reasonable need for them. Defendants' counterproposal  
2 of 250 hours of deposition per side expands the number of depositions from 20 to just over 37 --  
3 which is clearly inadequate given the scope of the issues and the number of Defendants and third  
4 parties. Oracle's proposal assumes a 7 hour day of testimony counts as one of the allotted 80  
5 depositions (though short depositions of 3.5 hours or less will only count as half a deposition).  
6 Given that some witnesses are likely to know more than others, Oracle opposes a presumption  
7 that individual depositions will last only 7 hours. Instead, relief from over-long depositions can  
8 be sought from Judge Legge.

9 **Interrogatories:** The Pretrial Order sets a limit of 75 interrogatories per side. To  
10 date, Oracle has served 65 interrogatories split among the three Defendants. Given the size and  
11 scope of the case, including the additional claims in the upcoming amendment, Oracle believes  
12 that an expansion of the interrogatory limit to 125 interrogatories per side, with the ability of  
13 either party to seek leave of court to obtain further interrogatories if necessary, is reasonable.

14 **Requests For Production And Requests For Admission:** The Parties agreed  
15 during the 26(f) Conferences that there should be no limit on Requests for Production or  
16 Requests for Admission.

17 In the Pretrial Order, following the initial Case Management Conference, Judge  
18 Jenkins appropriately set no limit for Requests for Admission, but did set a limit of 150  
19 document requests for Plaintiffs and the same number for Defendants. Before the initial Case  
20 Management, Oracle had already served 95 document requests on TN, 64 on SAP AG, and 64 on  
21 SAP America. These requests are almost all virtually identical. When the requests are lined up,  
22 Oracle has only served 96 truly unique document requests. However, Oracle served these  
23 requests separately to respect the corporate formality of each Defendant. Since then, Defendants  
24 have stated their belief that Oracle has surpassed the 150-request limit, and has warned Oracle  
25 that Defendants would not comply with any further document requests. Oracle should not be  
26 punished for treating Defendants as separate companies, during a time prior to the Pretrial Order  
27 when the Parties had already agreed to no limit on document requests. Nevertheless, if the Court  
28 agrees with Defendants' view, then Oracle respectfully requests that Court allow Oracle another

1 75 document requests for discovery on the new claims asserted in Oracle's Second Amended  
2 Complaint, as well as for follow-up on any remaining issues arising from the initial claims.

3 For the reasons set forth above and in Section 19 below, Oracle proposes an  
4 extension of the case schedule in the current Pre-Trial Order by approximately 12 months and,  
5 per Judge Legge's recommendation, refines the fact discovery period to allow liability discovery  
6 to precede damages discovery. Oracle also proposes extending the expert discovery period to  
7 accommodate what are likely to be complicated issues and testimony.

### 8 **B. Defendants' Position**

9 Judge Jenkins imposed reasonable limits on discovery and the schedule for this  
10 case, with the express goal of keeping the Parties focused on the core issues. Oracle does not  
11 want to be focused, nor does it apparently want to efficiently or timely resolve this case. Oracle  
12 started this case without ever raising its concerns with SAP, apparently preferring instead to use  
13 the burden of tens of millions of dollars of discovery expense and the attendant distraction to aid  
14 its ongoing competition with SAP. Oracle resisted the limits Judge Jenkins put in place last year,  
15 and has been fighting them ever since.

16 Oracle boasts of having produced "100,000 pages" of documents, a production  
17 which pales to invisibility in comparison with Defendants' production of almost 17 times that  
18 volume of numbered pages, in addition to terabytes of data in un-numbered formats. In contrast,  
19 more than a year after filing this lawsuit, based on alleged violations of the license obligations of  
20 Oracle's customers who sought TN support, Oracle still will not commit that its production of  
21 those critical license agreements is complete, even after Defendants filed a motion to compel.

22 Similarly, in October 2007, Oracle agreed to prioritize the production of  
23 responsive documents from a list of ten Oracle employees. As of March 11, 2008, Oracle had  
24 produced *nothing* from these custodians and Defendants were forced to file a motion to compel.

25 Moreover, Oracle is insisting on postponing damages discovery until a later stage  
26 in the case and then compressing the time period in which it can be done. It is simply unrealistic  
27 to conclude that Oracle will cooperate in any way with completing the damages discovery it has  
28 resisted for so long, in a compressed period near the end of the case.

1 Oracle has not met even the most basic of its discovery obligations. By contrast,  
2 Defendants have spent millions of dollars and tens of thousands of man hours on production in  
3 this case to date. More specifically, TomorrowNow has produced 1,688,307 Bates numbered  
4 pages from the files of key employees, including from the files of its executive committee  
5 members and the former CEO. In addition, TomorrowNow has produced 6 terabytes of native  
6 data (not Bates numbered), which includes items such as the main storage location for the  
7 downloads at issue in this case and the actual interactive databases that TomorrowNow uses to  
8 track all of its customer service activity from the inception of the sales cycle all the way through  
9 the daily and monthly maintenance TomorrowNow provides its customers. The SAP entities  
10 have produced 77,686 Bates numbered pages from key employees involved in the acquisition of  
11 TomorrowNow and in the SafePassage marketing campaign (a production of SAP documents  
12 that is already over 75% of that produced by Oracle, which is a compelling statistic when  
13 considering that SAP's production is on top of the almost 2 million pages and 6 terabytes of  
14 native files produced to date from TomorrowNow's files).

15 While the Defendants' herculean efforts to date have produced tremendous  
16 amounts of data, Oracle's overbroad discovery requests taken literally are leading to  
17 unmanageable amounts of data. Oracle's current requests essentially ask for every bit of data  
18 TomorrowNow has in its possession. In addition, Oracle's requests to the SAP entities, along  
19 with asking for other data, seek all data related to a SAP marketing campaign that involves SAP  
20 employees from around the globe and spans from 2004 to present. Without substantial  
21 limitations, the TomorrowNow and SAP productions as demanded by Oracle can never be  
22 completed within any reasonable time period.

23 Oracle's statement also ignores the effect its own dilatory conduct has had on this  
24 case. Oracle refused to permit Defendants to start discovery last July, arguing that "meet and  
25 confer" was not complete. When Oracle eventually and grudgingly agreed that discovery had  
26 started, it waited months before it requested the first of its "foundational" depositions. Oracle  
27 complains now of the far flung locations of the third parties (mostly its former customers) from  
28 whom it seeks discovery, but, again, it is to blame for the time it took in initiating discovery. For

1 example, Oracle waited weeks after belatedly starting 30(b)(6) depositions to serve even its first  
2 third party subpoena.

3           Discovery is often complicated, expensive and time-consuming. Oracle should  
4 not be rewarded by making it more so. Oracle's approach to discovery is to create a vicious  
5 circle of discovery demands that cannot be fulfilled in the schedule set by the Court, which then  
6 generates demands for more discovery and more time, but never requires Oracle to articulate its  
7 damages theory or desired relief in order to continue to move this case towards resolution,  
8 through trial or otherwise. The appropriate solution is to force Oracle to focus on the key issues  
9 in this case. Because Oracle will not focus the issues or bring this case to resolution voluntarily,  
10 focus should be imposed through limitations on discovery tools, as Judge Jenkins already  
11 recognized. Specifically, Defendants propose as follows:

12           **Damages Discovery** – The most important limit sought by Oracle is one that  
13 should not be imposed. Oracle should not be permitted to delay all discovery on damages until  
14 the end of discovery. Discovery into Oracle's alleged harm, its profits from direct service, its  
15 competition with third party service providers other than TomorrowNow, and many other,  
16 related topics, must resume now in order for the Parties to make meaningful progress towards a  
17 resolution of this dispute, regardless of whether that resolution will ultimately come through  
18 judicial or extrajudicial means.

19           **Fact Depositions** – The Parties should be limited to a total of 250 hours of fact  
20 depositions (including third party depositions) per side, rather than a particular number of  
21 depositions. Depositions would continue to be presumptively limited to seven hours for each  
22 individual, but time saved on one deposition could be used for others. This approach represents  
23 a compromise by Defendants in response to the developments in this case to date and is based on  
24 the hope that this Court will impose some reasonable limits on Oracle's relentless efforts to  
25 engage in overly broad and unduly burdensome discovery

26           **Interrogatories** – Again, in the spirit of compromise, Defendants would agree to  
27 Oracle's proposal that there be 125 interrogatories per side. Such interrogatories will only be  
28 useful if discovery is open on all topics at issue in this case and Oracle finally becomes willing or

1 is compelled to answer questions on such critical topics such as its theory of, and its claimed  
2 amounts for, damages.

3 **Requests for Admission** – No limits have been imposed and Defendants agree  
4 that none are necessary at this time.

5 **Requests for Production** – There is simply no need for additional requests for  
6 production of documents. As described above, Oracle has used its existing requests to demand  
7 production of almost incomprehensible volumes of data, volumes that cannot be managed,  
8 reviewed and produced on any reasonable time frame, regardless of the amount of resources  
9 garnered for the task. And, Oracle does not need additional requests to pursue its amended  
10 complaint, if and when it is ever actually finalized. Oracle’s alleged new claims are based on  
11 TomorrowNow’s access to Oracle software to provide third party support—Oracle “discovered”  
12 that fact early in the discovery process last year by virtue of Defendants’ disclosures in  
13 discovery, depositions and documents. Moreover, Oracle has already effectively asked for every  
14 shred of paper and data within TomorrowNow; it does not need more requests for production.  
15 What is needed is meaningful focus on the key issues in this case in order to avoid the irrelevant,  
16 unnecessarily duplicative, and oppressively over broad and unduly burdensome discovery that  
17 typified Oracle’s approach so far in this case.

18 Defendants’ position with respect to discovery scheduling is set forth below, in  
19 section 19, along with its position on other scheduling issues.

## 20 **10. Discovery Of Electronically Stored Information**

21 In the initial Joint Case Management Conference Statement, the Parties agreed on  
22 the format of production for electronically stored information (“ESI”). The Parties continue to  
23 meet and confer at various points during the case concerning the production of native format and  
24 images of certain electronic files, computers and servers. If the Court continues the use of the  
25 Discovery Special Master, the Parties expect to continue to address these disputes to Judge  
26 Legge as needed.

## 27 **11. Class Actions**

28 This case is not a class action.

1           **12. Related Cases**

2           There are no known related cases.

3           **13. Relief**

4           Oracle's Statement – Oracle seeks preliminary and permanent injunctive relief,  
5 return of stolen property, impoundment and/or destruction of all infringing materials, damages to  
6 be proven at trial, restitution, disgorgement, punitive damages, prejudgment interest, an  
7 accounting, fees and costs. Oracle is currently unaware of the amount of damages.

8           Defendants' Statement – More than a year after bringing this lawsuit (without any  
9 attempt to address its concerns directly to Defendants), Oracle still refuses to answer the critical  
10 question – what, if any, harm has it suffered that justifies dragging dozens of its former  
11 customers through the litigation process, diverting the resources of the Court from addressing  
12 other cases where the plaintiff is at least willing to state a specific claim for relief. Oracle insists  
13 that all discovery related to damages be deferred until January 2009, and has used the discovery  
14 master process to stall Defendants' investigation into its alleged damages and financial data  
15 relating to its alleged lost profits, including the margins on Oracle service and support. Oracle  
16 will not describe even a theory of alleged damages. Oracle insists on overly broad, unnecessary  
17 discovery into what TN accessed as part of providing third party support; it should be compelled  
18 to explain how TN's support of its former customers harmed Oracle, and to permit immediate  
19 discovery into that elusive claim.

20           **14. Settlement And ADR**

21           On February 12, 2008, at the request of Defendants and over Oracle's repeated  
22 objections, Judge Jenkins referred this case to mediation. On February 26, 2008, this Court  
23 assigned Richard H. Abramson to serve as the mediator. Mr. Abramson sent his initial contact  
24 letter to the Parties on March 21, 2008. The Parties held a preliminary call with Mr. Abramson  
25 on April 1, 2008, and since then have scheduled the mediation for May 29, 2008. There have  
26 been no further ADR or Settlement efforts to date.

27           **15. Consent To A Magistrate Judge For All Purposes**

28           Oracle consented to the Magistrate Judge. Defendants objected to this case being

1 tried before a Magistrate Judge.

2 **16. Other References**

3 **A. Oracle's Position**

4 With the consent of the Parties, on January 8, 2008, Judge Jenkins ordered that  
5 Judge Legge be appointed to act as the Special Master for discovery disputes. Through his  
6 months of service as the Discovery Special Master in this action, Judge Legge has gained  
7 considerable knowledge of the case, the Parties and the technical complexity of the discovery.  
8 Oracle believes that it would be inefficient for a different Special Master or other Judge to handle  
9 discovery disputes going forward, and therefore, requests that Judge Legge continue to serve in  
10 his capacity as Discovery Special Master in this action. Oracle also is willing to amend his  
11 mandate to give him final authority in rendering his discovery rulings. Oracle does not believe  
12 that any other references are necessary.

13 **B. Defendants' Position**

14 Defendants are mindful of the Court's March 20, 2008 Notice and Order  
15 declining to rule on Defendant's objections to the discovery master's first report and  
16 recommendations and stating that, at the CMC, "the court will discuss with counsel a case  
17 management plan that may or may not include use of a special master." Also pending with the  
18 Court are defendant's objections to the special master's second report and recommendations.  
19 Objections to the special master's third report and recommendations are not due to be filed until  
20 April 24, 2008.

21 Defendants agreed to the use of a discovery master to reduce the burden on the  
22 Court and help expedite the resolution of this case. Oracle, by contrast, appears intent on using  
23 the discovery process to overwhelm defendants with discovery burdens and to detract from the  
24 focus on the core issues. Per the Court's directive, Defendants will be prepared to discuss the  
25 continued use of a discovery master at the CMC and will seek the Court's guidance concerning  
26 the Court's preferred practices and approaches.

27 **17. Narrowing Of Issues**

28 Oracle's Position – Oracle believes it is premature to narrow issues, due to the

1 imminent filing of the SAC, which will expand the issues in this action. Discovery will need to  
2 proceed substantially further before the Parties will be in a position to narrow the issues here.

3 Defendants' Position – Oracle's long-promised and still "imminent" SAC merely  
4 adds alleged factual detail to legal claims first asserted more than a year ago. The only reason  
5 issues cannot be narrowed in this case is because Oracle steadfastly refuses to try, and refuses  
6 any discovery on the most important issue of all – whether Oracle was actually harmed by  
7 competition in the market for third party support. As described, the three basis questions in this  
8 case (what Oracle software did TN copy? how did TN use that software in providing third party  
9 support? was Oracle harmed at all) can and should serve as the means of focusing discovery,  
10 issues and trial in this case.

#### 11 **18. Expedited Schedule**

12 Oracle's Position – Per the description of the case provided above, this is not the  
13 type of case that can be handled on an expedited basis with streamlined procedures.

14 Defendants' Position – Discovery focused on the issues truly in dispute, coupled  
15 with Court-ordered mediation and/or settlement conferences, will help expedite the resolution of  
16 this case.

#### 17 **19. Scheduling**

18 Both Parties propose an adjustment of the current case schedule to accommodate  
19 discovery, both on the initial claims and the forthcoming Second Amended Complaint. They  
20 agree on a one year extension over all, though differ on when certain dates within the expanded  
21 schedule should occur. The following chart shows the current case schedule, and lays out the  
22 agreed upon proposed new dates, as well as those proposed new dates where the Parties differ (in  
23 bold). The Parties' arguments for the different dates then follows:

24  
25  
26  
27  
28

	<u>Current</u>	<u>Oracle</u>	<u>Defendants</u>
1			
2	<u>Trial date</u>	2/9/09	2/12/10
3	<u>Pretrial conference</u>	1/27/09	1/29/10
4	<u>Start Damages Discovery</u>	n/a	<b>01/05/09</b>
5			<b>Now</b>
6	<u>Non-expert discovery cutoff</u>	7/25/08	<b>06/27/09</b>
7	<u>Designate experts</u>	8/8/08	<b>07/17/09</b>
8	<u>Expert reports</u>	8/15/08	<b>07/03/09</b> (party with burden)
9			<b>07/17/09</b> (party with burden, including docs relied upon)
10	<u>Designate rebuttal experts</u>	8/29/08	<b>09/04/09</b>
11	<u>Rebuttal expert reports</u>	Rule 26(a)(2)	<b>09/18/09</b>
12			<b>10/02/09</b> (and docs relied upon)
13	<u>Expert discovery cutoff</u>	9/12/08	<b>10/30/09</b>
14	<u>Dispositive motion hearing</u>	11/13/08	12/09
15			12/09 (last time for hearing)
16	<u>Settlement conference</u>	10/08	12/09
17			<b>10/08 and 12/09</b>

#### A. Oracle's Position

The first date in dispute is the date Oracle proposes for *commencement of damages discovery* (January 5, 2009). Oracle proposed this based on Judge Legge's understandable recommendation that the Parties first concentrate on understanding and unearthing the vast and complex evidence establishing liability and use because it will necessary determine the scope of the damages. It allows liability evidence to be focused on exclusively this year, then over six months of damages fact discovery. The *non-expert discovery cut-off* date of June 27, 2009 was actually initially proposed by Defendants, who then moved it even earlier. Given trial is not until February of 2010 and initial expert reports under Oracle's schedule are not due for a month, an earlier date seems inappropriate. Oracle's *expert-related dates* are more even-handed than Defendants' and acknowledge the need to get expert discovery completed before dispositive motions must be briefed. Oracle's proposal allows Defendants six weeks

1 (from July 31 to September 18, 2009) to digest Oracle's experts' reports and depose those  
2 experts before having to produce their experts' rebuttal reports. Oracle only gets five weeks  
3 (September 18 through October 30, 2009 ) to digest those rebuttal reports and depose  
4 Defendants' experts. This leaves six weeks thereafter before the agreed upon December 9, 2009  
5 hearing on dispositive motions. In contrast, Defendants' expert schedule provides them two and  
6 a half months to depose initial experts after their reports are provided (July 17, 2009) and  
7 rebuttal reports are due (October 2, 2009) while their expert discovery cut off (November 6,  
8 2009) gives Oracle only a month to digest those rebuttal reports and depose those rebuttal  
9 experts. Moreover, that cut off is less than a month from the agreed upon hearing on dispositive  
10 motions (December 9, 2009) and interferes with the planning and briefing of such motions.  
11 Finally, in addition to the agreed upon pre-trial settlement conference in December 2009,  
12 Defendants' propose an additional *settlement conference* in October 2008. The Parties are  
13 already having a court-ordered mediation in May of this year. Given the incomplete state of  
14 discovery, Oracle anticipates another settlement conference five months later is premature,  
15 though Oracle will, of course, adhere to any schedule the Court deems appropriate.

#### 16 **B. Defendants' Position**

17 The schedule entered by Judge Jenkins last year led up to a trial in February 2009.  
18 That schedule assumed that Oracle sued because it wanted to resolve its claims, as opposed to  
19 seeking limitless discovery and waging discovery battle after discovery battle while refusing to  
20 permit discovery into the damages it seeks. Whatever its motive, Oracle has succeeded in  
21 enforcing document requests and scope of discovery far out of proportion to the core issues in  
22 this case, and threatens to broaden discovery further still.

23 Thus, given the lack of enforcement of the limits on Oracle's insatiable thirst for  
24 documents that was implicit in Judge Jenkins' schedule, Defendants now have little choice but to  
25 agree that the trial date should be continued one year as Oracle proposes, although the Parties  
26 continue to disagree on certain details of pretrial schedule as outlined in the chart above. The  
27 amended proposed schedule will permit Oracle to exhaust itself in wading through terabytes of  
28 cumulative information until, hopefully, it decides to state its alleged damages and attempt to

1 resolve this dispute.

2 The remaining disputes regarding the pretrial schedule are: (1) commencement of  
3 damages discovery; (2) adequate time for discovery between initial expert reports and rebuttal  
4 expert reports; and (3) maintenance of the October 2008 Settlement Conference.

5 1. Commencement of Damages Discovery – Oracle has many relevant  
6 documents close at hand regarding the financial aspects and related profitability of its software  
7 sales and maintenance business. They will undoubtedly form the basic underpinnings of at least  
8 some of whatever damage theories it eventually articulates. That Oracle has not decided—over  
9 one year after suing—which damage theories it intends to pursue does not justify its refusal to  
10 provide even basic discovery that will apply to its inevitable damage claims. Postponing  
11 damages discovery not only delays the resolution of the case but seriously prejudices  
12 Defendants’ ability to adequately prepare a response to Oracle’s damages experts.

13 2. Time Between Initial Expert Reports and Rebuttal Expert Reports - After  
14 receiving Oracle’s multiple expert reports, Defendants must have adequate time to review their  
15 reports and referenced data, depose them and prepare its multiple responses on subjects that  
16 according to Oracle are “vast and complicated”. Oracle’s own statement acknowledges that  
17 “expert discovery will be complicated and critical” with “several highly technical expert  
18 depositions” of “industry experts and damages experts” who “have a massive amount of material  
19 to analyze before they can provide their reports and testimony.” Thus, Oracle’s proposed six  
20 week gap between expert reports is simply not enough time given the technical issues in this  
21 case. By reducing that period from twelve weeks to eleven, Defendants have already tried to  
22 compromise off of what they already believe is the absolute minimum time required to fully and  
23 properly respond to Oracle’s expert reports.

24 3. October 2008 Settlement Conference – Oracle has so far resisted  
25 Defendants’ suggestions that the Parties seek the Court’s or a mediator’s help to identify and  
26 resolve the key issues in this case. It has also resisted Defendants’ efforts to provide information  
27 about the potential sale of certain assets of TomorrowNow. Nevertheless, Defendants continue  
28 to believe that a non-judicial resolution of this case is possible and preferable for all concerned.

1 However, given Oracle's sweeping allegations, Defendants are practical enough to understand  
2 that periodic, and even at some point, sustained, settlement communications will be essential to  
3 any good faith attempt to settle this case. The Parties have agreed to continue with the one-day  
4 court ordered mediation set for May 29, 2008. And, keeping Judge Jenkins' court ordered  
5 conference in October 2008 is certainly not unreasonable, especially given the millions of dollars  
6 that the Parties are collectively expending each month litigating this case. Even if a global  
7 settlement of all claims and all issues between the Parties is not achieved either in May or  
8 October of this year, any progress the Parties can make at that those meetings towards narrowing  
9 the issues in dispute will be a substantial and productive step toward an ultimate resolution of  
10 this case.

## 11 **20. Trial**

12 All Parties have requested a trial by jury on all issues so triable. The current  
13 Pretrial Order sets the proposed length of trial at four weeks. Given the expansion of the scope  
14 of the claims, Oracle believes six weeks should be scheduled for trial. Defendants believe that,  
15 subject to a proper focusing of the issues and reasonable discovery limits, the four week trial set  
16 in the Pretrial Order remains reasonable.

## 17 **21. Disclosure of Non-Party Interested Entities or Persons**

18 Plaintiffs timely made their disclosures under Local Rule 3-16 and Rule 7.1(a) of  
19 the Federal Rules of Civil Procedure on March 22, 2007 (*see* Docket No. 2). Defendants timely  
20 made their disclosures under Local Rule 3-16 and Rule 7.1(a) of the Federal Rules of Civil  
21 Procedure on July 2, 2007 (*see* Docket Nos. 37, 38).

## 22 **22. Other Matters Any Party Considers Conducive To The Just, Speedy And 23 Inexpensive Determination Of This Action**

24 *Prior Agreements:* In the initial Joint Case Management Conference Statement,  
25 the Parties expressly stipulated out of the privilege log requirements stated in *Burlington*  
26 *Northern v. District Court*, 408 F.3d 1142, 1149 (9th Cir. 2005), and therefore agreed that the  
27 production of privilege logs within 45 days after the production of a party's documents is  
28 reasonable and would be sufficient to preserve the party's privilege objections. The Parties

1 further agreed that communications with outside counsel need not be logged or disclosed.  
2 During subsequent meet and confer discussions, the Parties further agreed that the 45-day period  
3 for privilege logs begins to run from the production of documents from which the privileged  
4 material was withheld, and also agreed that communications involving in-house counsel need not  
5 be logged or disclosed after March 22, 2007.

6 *Use of Search Terms and Custodian Lists:* In addition, the Parties continue to  
7 meet and confer on the use of search terms and to limit the relevant custodian lists in an attempt  
8 to reduce the volume and enhance the usefulness of each side's respective document productions.

9 **Oracle's Position:** Given the scope of the new claims and the fact there are three  
10 large Defendants, Oracle believes those custodians whose documents should be searched should  
11 continue to be those who the Parties determine, in good faith, are likely to have responsive  
12 documents. However, if the Parties can arrive at a reasonable list of such persons, Oracle is  
13 willing to adopt it. Given the focus on production from TN to date (which Defendants admit has  
14 required production from dozens of custodians and numerous databases and servers) Defendants'  
15 proposal of only 30 more custodians appears unreasonable. Moreover, it will only act to curtail  
16 the long-awaited production from SAP America and SAP AG -- companies with thousands of  
17 employees. Until Oracle can be assured that the SAP America and SAP AG custodians searched  
18 are the appropriate ones, it cannot agree to an artificial limit. That assurance can only come from  
19 reviewing those companies' productions (which are only just beginning), taking those  
20 companies' depositions (which have not yet occurred). Oracle has suggested search terms and is  
21 working with Defendants to arrive at an agreed upon list. Should the Parties fail to reach  
22 resolution, Judge Legge can hear and recommend solutions.

23 **Defendants' Position:** Oracle's position on these issues typifies their continued  
24 attempts to conduct limitless discovery. Oracle and SAP entities are very large companies with  
25 tens of thousands of employees. Thus, Oracle's suggested "limitation" on custodians to those  
26 "likely to have responsive documents" misses the point and is no limitation at all in light of the  
27 literally thousands of persons on both sides of this case who might otherwise be covered by  
28 Oracle's definition of a person "likely to have responsive documents."

1 The impact of Oracle's overbroad requests should be moderated, and order  
2 imposed on discovery, by the use of two document review devices typical in large case litigation.  
3 First, the Parties' review of responsive documents should start with a reasonable number of  
4 custodians. The Parties had originally discussed prioritizing the production of 10-15 custodians  
5 per side. That remains a reasonable limit, particularly in view of the fact that for Defendants the  
6 number is in addition to the dozens of TN custodians whose documents Defendants have already  
7 agreed to review and produce. However, in an effort to move things along, Defendants have  
8 proposed limiting custodians for review to thirty per side, in addition to TN custodians already  
9 identified, subject to showing of good cause for review of additional custodians beyond those  
10 thirty.

11 Second, the Parties should focus the review of the identified custodians by use of  
12 search terms. While, Oracle actually agrees in principle with both these points, as it has limited  
13 its review of documents to individual custodians it has selected, and by use of search terms it  
14 chose for itself. The problem is that the Parties have yet to reach an agreement on the logistics of  
15 implementing that approach, and judicial intervention may ultimately be necessary to effect a  
16 reasonable resolution.

17 Defendants will continue its meet and confer efforts with Oracle on these issues  
18 and if the Parties are ultimately unable to agree, then Defendants will present their detailed  
19 proposal via an appropriate motion.

20 *Judge Legge's Authority:*

21 **Oracle's Position:** Oracle believes that providing Judge Legge final authority to  
22 make discovery orders would be more efficient. At minimum, Oracle proposes shortening the  
23 time to appeal any of Judge Legge's recommendations to 10 days from the current 20.

24 **Defendants' Position:** In Section 16(B), above, Defendants have stated their  
25 position with respect to the continued use of a discovery master in this case. Moreover,  
26 Defendants will be prepared to address this issue in real time during the conference on April 24<sup>th</sup>  
27 given that the Court has advised the Parties that "the court will discuss with counsel a case  
28 management plan that may or may not include use of a special master."

*Waiver of Hague Convention Protocols:*

**Oracle's Position:** Oracle has requested SAP AG waive Hague Convention protocols for its personnel's depositions, and has provided authority in support. This will reduce delay and remove procedural barriers to fact discovery.

**Defendants' Position:** Defendants cannot waive for their employees those employees' rights and Defendants' obligations under the Hague Convention and implementing legislations in various foreign jurisdictions. However, Defendants have repeatedly advised Oracle that they will work with Oracle and such personnel in an effort to maximize the efficiency of such depositions, if and when Oracle requests them.
